### Risk Centre Conference Out-brief Event Overview:

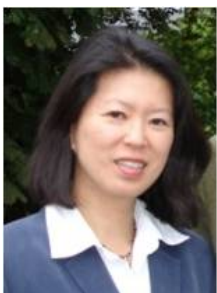

External conferences are opportunities to build important networks and gain better understanding of real-world problems faced by industries and governments. The Cambridge Risk Centre believes that it is a privilege for its members to participate in such external events, and sees value in sharing this experience with others in the community who desire to gain insight into the events. The Conference Out-brief Event is an opportunity to host an informal roundtable discussion around a variety of external conferences.

### 2010 Bloomberg New Energy Finance Summit: Time to Commit

Reviewed by Michelle Tuveson, Acting Executive Director of the Cambridge Centre for Risk Studies

This Risk Centre event is a result of CJBS students taking the initiative to gain insight into the New Energy Finance Sector and making a targeted request for a conference overview and discussion. Having been fortunate to attend, I will present a review of this meeting. An overview of the meeting will be provided as well as a review of available reference materials from the summit. A summary of the meeting highlights will lead into a facilitation of an informal roundtable discussion aimed at those interested in pursuing this sector.

"The 2010 Bloomberg New Energy Finance Summit has now come and gone. What an extraordinary three days it was as over 300 industry leaders and key decision makers gathered to discuss the future of the low carbon and renewable energy sector. The attending thought leaders covered a wealth of topics from renewable energy investment decisions, to the growth of the clean energy market in Asia, to policy debates taking place the world over. There were compelling speeches and useful insights from those at the forefront of the sector..." *Bloomberg New Energy Finance Summit*

Michelle Tuveson is the Acting Executive Director and founding member of the Cambridge Centre for Risk Studies, as well as the Cambridge Complexity Consortium. She is currently the Lockheed Martin Liaison for Cambridge-based initiatives. She has worked for management consulting firm, Booz Allen & Hamilton. She was awarded by the Career Communications Group, Inc. as a Technology Star for Women in Science, Technology, Engineering and Maths (STEM). She has degrees from MIT & Johns Hopkins University and is an associate of Clare Hall College Cambridge.
