

## Small-Scale Cogeneration: Benefits and Barriers

Kyle Siler-Evans  
Carnegie Mellon University

2010 TMP Meeting

## The Current System...

▶ 1

## Cogeneration is ~30% more efficient

▶ 2

## Emissions Benefits

- ▶ **1% penetration of cogeneration:**
  - ▶ ~0.5% reduction in CO<sub>2</sub> emissions.
  - ▶ ~1 to 1.5% reduction in SO<sub>2</sub> emissions.
  - ▶ Likely to reduce overall NO<sub>x</sub> emissions, but may increase NO<sub>x</sub> near population centers.

▶ 3

### Adoption of Cogeneration

- ▶ Switzerland: 77%
- ▶ Denmark: 44%
- ▶ United States: 9%

▶ 4

### Slow Adoption of Small-Scale Cogeneration

- ▶ Cogeneration is a high risk, low return investment.
  - ▶ Large capital expense
  - ▶ Low capacity factor for meeting thermal demand
  - ▶ Huge uncertainties in future fuel and electricity prices

▶ 5

### Limit Analysis To...

- ▶ Retail commercial buildings in the mid-Atlantic region.
- ▶ Natural gas-fired generators
  - ▶ Turbines from 1 to 40 MW
  - ▶ Micro-turbines from 30 to 250 kW
  - ▶ Reciprocating engines from 100 kW to 5 MW

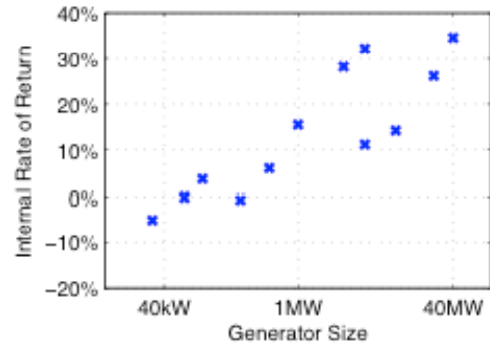

▶ 6

### Increasing Revenue for Cogeneration

▶ 7

### Economies of Scale

▶ 8

### Uncertainty in Future Energy Prices

▶ 9

### Solutions

- ▶ “Clean Energy Standard Offer Programs” (CESOP)
- ▶ Micro-grids
- ▶ Standardized smart meters
- ▶ Reevaluate policies that are aimed at clean energy but limited to renewable energy.

▶ 10

### European vs. American Experience

#### Europe

- ▶ District Heating
- ▶ Utility Owned
- ▶ Generous Net-Metering Rates

#### U.S.

- ▶ Nope
- ▶ End-User Owned
- ▶ Nope

▶ 11
