Challenge: Inframarginal rents / extraordinary profits

"At the moment one of the problems is that people are being charged for their electricity prices on the basis of the top marginal gas price, and that is frankly ludicrous, we need to get rid of that reforming the market, by changing the way things work, you can get prices down."

#1 Voluntary CfDs

#2 Cost Plus Revenue Limit

#3 EGL

Can existing renewables and nuclear help keep prices down next winter?

The case for a 'pot zero' CfD auction

Discussion Paper

Cost-Plus Revenue Limit

The government is taking steps to break the link between abnormally high gas prices and how much revenue low-carbon electricity generators receive. This will allow consumers to pay a fair amount for their electricity, and ensure electricity generators are not unduly profiting from the energy crisis caused in electricity generators are not unduly profiting from the energy crisis caused in part by Russia's invasion of Likraine. The government recognises the importance of dispatchable and baseload generation for security of supply. The low-carbon technologies that can deliver these types of power do tend to have higher input costs (such as blomass and nuclear) and this is being considered as part of the detailed policy design.

Electricity generator levy

Technical note

RWE 11.01.2023 Page 3

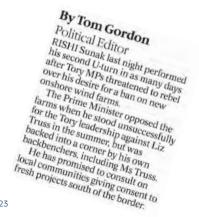

A few words on the Electricity Generator Levy...

- Welcome clarity! (finally)
- Is this it? or is there more to come...
- Should only target <u>realised</u> extraordinary profits
- £75/MWh should be index-linked
- Consider at least equivalent capital allowance relief for generators as for oil and gas
- Increase CfD pot sizes / budget to compensate for inevitable attrition of merchant projects in the pipeline

Page 4 1.01.2023

Other challenges we're facing...

- Energy Prices Act s 21 / 22
- REMA Physically split market? LMP?
- Onshore wind / solar will they, won't they?

Delegated Powers and Regulatory Reform

Clause 22 confers a power on the Secretary of State to give a direction to a person holding an energy licence or the Northern Ireland Regulator. The power may be exercised where the Secretary of State considers that the giving of a direction is appropriate either:

- in response to the energy crisis,7 or
- in connection with the Bill, regulations made under the Bill or anything done or proposed to be done under the Bill, or in connection with a domestic energy price reduction scheme.

In our view clause 22 constitutes the delegation of a wide legislative power:

- It allows requirements to be imposed on energy licence holders which
- Clause 22(5) provides that, where a direction conflicts with the requirements of an enactment, those requirements are to be disregarded. This in effect makes it a Henry VIII power because it allows the effect of legislation, including primary legislation, to be modified by a direction.
- It is possible for the powers to be used so that requirements apply generally, such as to all energy licence holders of a particular description. Paragraph 156 of the Memorandum suggests that the power is expected to be used in this way, when it refers to the power being used to set the terms of certain support schemes.
- There are no limits on the kinds of requirements which may be imposed through the directions power.
