nationalgrid

There is a growing expectation to demonstrate impact 'Beyond the Bottom Line', including from investors

National Grid sustainability performance and priorities

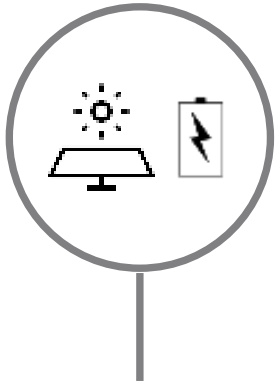

What does 2050 look like?

- Energy must remain reliable
- From cities to villages, we will have clean electricity, transport and heat
- The transition must be fair
- Our country and communities should thrive, with nobody left behind

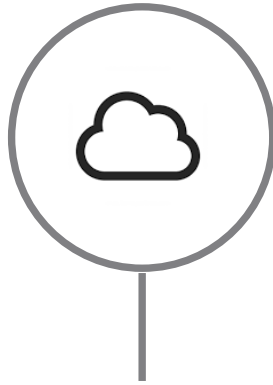

Consideration across five key areas is required for a fair and affordable transition to net zero

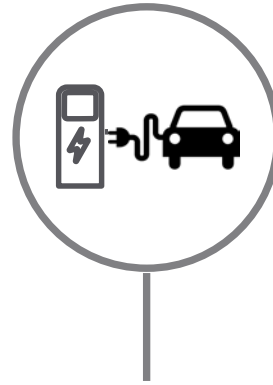

**1. Electrification
at Scale**

**2. Decarbonise
Heat**

**3. Capture
Emissions**

**4. Decarbonise
Transport**

**5. Workforce
and skills**
